Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous\_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

A horizontal number line with major tick marks at 37,960,000, 37,970,000, 37,980,000, and 37,990,000. There are also minor tick marks between these major values, representing intervals of 10,000 units. The labels are placed above the major tick marks.

IPR021966

Figure 1 displays four pie charts representing the distribution of protein families in the IPR025086 database. The charts are labeled with their respective IDs: IPR021966, IPR031774, IPR025086, and IPR000690. Each chart shows the number of families in each category (1, 27, 150, 1, 79, 132).
