The diagram shows a horizontal black line representing a 1D lattice. Several colored blocks and arrows are placed along this line. From left to right, there is a small pink block, a blue arrow pointing right, a large green block with a green outline, a small green block, a large blue block, a small blue arrow pointing right, a small purple block, a small orange block, a small dark blue block, a small green block, a small pink block, a small brown block, and a large red block. The blocks and arrows are arranged in a sequence that suggests a specific physical process or interaction.

A diagram of a 1D lattice represented by a horizontal line. On the left, there is a small green square, followed by a grey square, and then a green square. A red bracket is positioned above the grey and green squares. Further to the right, there is a blue square, followed by an orange square, a dark blue square, a green square, a pink square, a brown square, and finally a cyan square.

A schematic diagram of a protein structure. A horizontal black line represents the protein backbone. On the left, there is a small grey rectangle. To its right is a larger grey rectangle. Further right is a blue rectangle. A red line forms a loop connecting the top of the larger grey rectangle to the top of the blue rectangle. To the right of the blue rectangle, the black line continues horizontally.

The diagram shows a protein structure with a grey box at the N-terminus, followed by a long black line representing the protein backbone. Several colored vertical bars are placed along the backbone, representing domains. The colors are purple, yellow, blue, green, pink, orange, and teal. To the right of the main protein structure, there is a separate horizontal bar with a grey box at the N-terminus, followed by a long black line. Below this bar, the text "No domains" is written.
