Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The image contains two horizontal number lines. The left number line has major tick marks at 151,696,000, 151,699,000, 151,702,000, and 151,705,000. The right number line has major tick marks at 40, 80, 120, 160, and 200.

A diagram of a chromosome with a centromere and two arms. The left arm has a pink band. The right arm has a green band. A green oval with the number 52 is shown below the right arm.

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The figure displays two horizontal axes at the top. The left axis is labeled "Genomic Position (bp)" and has major tick marks at 151,696,000, 151,697,500, 151,699,000, 151,700,500, 151,702,000, and 151,703,500. The right axis is labeled "Amino Acid Position" and has major tick marks at 40, 80, 120, 160, and 200.
