The diagram shows a horizontal black line representing a chromosome. A vertical red line is positioned near the left end, and a vertical blue line is positioned near the right end. Below the black line, there are three vertical colored bars: a green bar on the left, a blue bar in the middle, and a light blue bar on the right. To the right of the chromosome, there is a horizontal bar with a green segment, a blue segment, and a light blue segment. Below this bar, there is a small oval containing the number '72'.

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous\_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.
