Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous\_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.
