Transcript: ENST00000524873.1 | Protein: N/A [no protein]

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

A horizontal number line with major tick marks at 121,500,000 and 121,600,000. There are four additional tick marks between these two major values, dividing the interval into five equal parts. The values 121,475,000, 121,525,000, 121,575,000, and 121,625,000 are labeled above the tick marks. The tick mark for 121,475,000 is the first mark to the left of 121,500,000. The tick mark for 121,525,000 is the second mark to the right of 121,500,000. The tick mark for 121,575,000 is the fourth mark to the right of 121,500,000. The tick mark for 121,625,000 is the fifth mark to the right of 121,500,000, which is also the first mark to the right of 121,600,000.
