No domains

No domains

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain in the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The figure displays a genomic track for the transcript ENST00000529445.1. The top part shows a genomic scale from 121,475,000 to 121,625,000. Below this, a table lists the transcript's features, including the event 'transcript_doesnt_have_features' and the transcript ID 'ENST00000529445.1'. The bottom part shows a domain plot with a single bar labeled 'No domains'.
