Only InterPro Domain and Repeat entries are drawn, and only those that are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3D5A/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The diagram shows a horizontal line representing a chromosome. A vertical red line is positioned near the left end, and a vertical blue line is near the right end. A small red rectangle is located on the left side of the chromosome, and a small blue rectangle is on the right side. To the right of the chromosome, there is a horizontal bar with a green segment on the left and a blue segment on the right. Below this bar is a small oval containing the number '1' and the number '72'.

The diagram shows a horizontal line representing a chromosome. On the left, there is a red vertical bar. In the center, there is a purple vertical bar. On the right, there is a grey vertical bar. To the right of the chromosome, there is a horizontal bar with a green segment, a blue segment, and a purple segment. Below this bar, there is a blue oval containing the number '1' and '72'.
