The diagram shows a protein with a signal peptide (red box) and a transmembrane domain (orange box). The signal peptide is located at the N-terminus, and the transmembrane domain is located in the middle of the protein. The protein is shown as a horizontal line with a black arrow pointing to the right. The signal peptide is labeled "Signal peptide" and the transmembrane domain is labeled "Transmembrane domain".

Transcript: ENST00000692465.1 | Protein: ENSP00000508680.1

FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The figure displays two horizontal scales. The left scale, labeled 'Genomic Position (bp)', ranges from 49,060,000 to 49,024,000 with major ticks every 2,000 bp. The right scale, labeled 'Amino Acid Position', ranges from 0 to 5,000 with major ticks every 1,000 aa. Vertical dashed lines connect the two scales at specific positions: 49,054,000 bp corresponds to amino acid 1,000; 49,048,000 bp to 2,000; 49,042,000 bp to 3,000; 49,036,000 bp to 4,000; and 49,030,000 bp to 5,000. The gene 'yjaH' is indicated by a bracket below the genomic scale, spanning from approximately 49,054,000 bp to 49,024,000 bp.

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous\_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.
