No domains

No domains

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain in the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

A horizontal number line with major tick marks at 121,500,000 and 121,600,000. There are four additional tick marks between these two major values, dividing the interval into five equal segments. The values 121,475,000, 121,525,000, 121,575,000, and 121,625,000 are labeled above the tick marks that are one, two, three, and four segments to the right of 121,500,000, respectively.
