Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

Diagram illustrating the concept of domains. A horizontal line is shown with a green vertical tick and a red vertical tick. To the right, a horizontal bar is shown with a red segment and a white segment, labeled "No domains".

A horizontal number line with tick marks. The values are labeled as follows from left to right: 38,600,000, 38,580,000, 38,560,000, 38,540,000, 38,520,000, 38,500,000, and 38,480,000. Vertical dashed grid lines extend upwards from each tick mark.
