Transcript: ENST00000558354.5 | Protein: ENSP00000454105.1

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3D5A/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The diagram illustrates the domain architecture of two proteins. The top part shows a linear sequence of domains represented by colored blocks. The bottom part shows two specific protein structures, IPR007110 and IPR003961, with their respective domain architectures highlighted. IPR007110 is shown with a green domain (1-117) and a blue domain (118-125). IPR003961 is shown with a green domain (1-117) and a blue domain (118-125).
