Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3D5A/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

A horizontal number line is shown, ranging from 6,580,000 to 6,589,000. Major tick marks are labeled at 6,580,000, 6,581,500, 6,583,000, 6,584,500, 6,586,000, 6,587,500, and 6,589,000. Minor tick marks are present every 100,000 units. A vertical dashed line is drawn at the 6,583,000 mark.
