Only InterPro Domain and Repeat entries are drawn, and only those are compared — so every domain the events table names appears here. Neither drawn nor compared: InterPro Family and Homologous_superfamily entries, the residue features (active/binding/conserved site, PTM), and member-database signatures (G3DSA/PTHR/SSF/cd/PF), which are not curated structural units. FILLED = compared. HOLLOW = removed before the comparison, so no row of the events table can refer to it — an entry that duplicates a longer kept entry of the same accession overlapping it.

The image shows two horizontal number lines. The left number line has major tick marks at 58,920,000, 58,904,000, and 58,888,000. Above the line, there are three points marked with vertical dashed lines and labeled: 58,912,000 (between 58,920,000 and 58,904,000), 58,896,000 (between 58,904,000 and 58,888,000), and 58,880,000 (between 58,888,000 and the next tick mark). The right number line has major tick marks at 200, 400, 600, 800, and 1000. There are no labels on this line.
